

## List of Figures

Figure 1. Oneida County landownership, subdivisions, and proposed drafting and dry hydrant locations.....	5
Figure 2. Oneida County vegetation map.....	6
Figure 3. Historic fire perimeters within Oneida County.....	9
Figure 4. Summit Subdivision showing heavy fuel loads and low survivable space.....	24
Figure 5. New Canyon Subdivision showing fine fuels and moderate survivable space.....	25
Figure 6. New Canyon Subdivision home showing fine fuels and moderate survivable space. ....	25
Figure 7. Juniper Addition showing fine fuels, heavy juniper and no survivable space.....	26
Figure 8. Holbrook home showing fine fuels and low survivable space. ....	26
Figure 9. Abandoned structures within Holbrook showing fine fuel buildup and low survivable space. ....	27
Figure 10. Third Creek Subdivision home showing adequate survivable space.....	27
Figure 11. Heavy fuels at base of power poles.....	28
Figure 12. Devil Creek Reservoir outlet showing dry hydrant or drafting location. ....	28
Figure 13. Fuel load model and the distribution of different fuel load classes. ....	29
Figure 14. Fuel moisture compared to different fuel load classes. (The lower the number the lower the fire risk value.).....	30
Figure 15. Fire risk associated with the spread rate of different fuel load classes. (The lower the number the lower the fire risk value.) ....	31
Figure 16. Fire risk compared to the amount of energy (intensity) each fuel produces. (The lower the number the lower the fire risk value.) ....	32
Figure 17. Wildland Fire Hazard Rating. ....	33
